CURRICULUM VITAE

1. PERSONAL RECORD.

Full name: **Dr. Hovhannes Khudaverdyan**
(in most of scientific articles after 2000 H. M.Khudaverdian, before 2000: O.M.Khudaverdian)

Nationality: British, Armenian
Date and place of birth: 28 May 1955, Yerevan (Armenia)

Marital status: Married with two adult sons.
Place of residence: 33 Highfield Road, Prestwich, Manchester M25 3AQ.
Languages: Armenian and Russian mother tongues, English fluent, French competent

Phone: (0161) 200 8975

FAX: (0161) 200 3669

E-mail: khudian@manchester.ac.uk

2. EDUCATION AND QUALIFICATIONS.

Ph.D. in Theoretical and Mathematical Physics. 1982
    Thesis: *Multiplicative and Additive Functionals; their Role in*
            Quantum Field Theory
    Advisor: Professor A.S. Schwarz.
    Referees: Professor V.I. Ogievetsky, Professor Yu.I. Manin

1978–1981   *Postgraduate student*
           Department of Theoretical Nuclear Physics
           Moscow Physical Engineering Institute (MPEI).

M.S. in Physics (with Honors). 1978.
    Thesis: On Anomalies in Quantum Field Theory.
    Advisor: Professor A.S. Schwarz.

1975–1978   Department of Theoretical Nuclear Physics
           Moscow Physical Engineering Institute.

1972–1975   Department of Physics
           Yerevan State University.

3. PROFESSIONAL EXPERIENCE.

Current position:

Since August 2005 Senior Lecturer in Pure Mathematics, University of Manchester

Previous positions:

2001—2005	Lecturer in Pure Mathematics, UMIST
	(University of Manchester from 2004)
1996—2005	Senior Researcher,
	Laboratory of Computing Technique and Automation
	Joint Institute for Nuclear Research (Dubna, Russia)
Since 1985	Senior Researcher, Department of Theoretical Physics
	Yerevan State University (Yerevan, Armenia)
1981–1985	Junior Researcher, Laboratory of Theoretical Physics
	Yerevan Physics Institute (Yerevan, Armenia)

Invited guest positions:

January 2012	Guest Professor in I.H.E.S. (Paris)
Autumn 2011	Guest Professor Max-Planck-Institut für Mathematik (Bonn)
2000	Academic Visitor, UMIST
Autumn 1999	Guest Professor Max-Planck-Institut für Mathematik (Bonn)
Autumn 1994	Professor of Mathematics, Advanced Institute of Basic Sciences
	(Zanjan, Iran)
10.1988–08. 1989	Visiting Researcher, Department of Theoretical Physics
	Geneva University (Geneva, Switzerland)

Research grants:

10-2010 and 02-2012; LMS (scheme 2) grant	supporting a visitor to UK
10-2007 and 07-2008	Royal Society grants for conferences
2000-2001	EPSRC
1996–1998,	INTAS-RFFI: European Union and
	Russian Foundation for Basic Research
1993–1995	International Science Foundation

Invited talks (after 2000):

November 2011	Geometry Seminar in Liege University (Belgium)
January 2010	Analysis and Geometry Seminar in Newcastle University
December 2009	Mathematics Seminar in Valencienne University (France)
December 2009	Mathematical Physics Seminar in Lille University (France)
October 2009	Geometry and Topology Seminar in Aberdeen University
May 2008	Mathematical Physics Seminar in Bordeaux University (France)
April 2008	W.Brauder Special topology seminar in Princeton University (USA)
January 2008	S.P. Novikov Geometry and Topology Seminar,
	V.A. Steklov Mathematical Institute (Moscow)
November 2007	Applied Mathematics Seminar in Brunel University
January 2007	All-Moscow seminar "Globus"
December 2006	Geometry seminar in Independent University
January 2006	Geometry Seminar in Edinbuirg University
September 2004	I.R.Shafarevitch Algebra Seminar, Steklov Institute (Moscow)
February 2004	Seminar on Mathematical Physics, University of Loughborough
December 2003	Analysis/Geometry Seminar, King's College
October 2003,	Bristol Pure Mathematics Seminar
October 2003,	Liverpool Pure Mathematics Colloquium
September 2003	I.V. Tamm Department of Theoretical Physics, Moscow
April 2003,	Geometry of differential equations Seminar, Moscow, IU
July 2002	International Workshop Quantum Gravity and Superstrings, Dubna
November 2001,	Geometry with Brackets and Quantization, Warwick
December 2000	Geometry and Theoretical Physics Seminar, King's College London
November 2000	N. Hitchin Geometry and Analysis Seminar, Oxford University
November 2000	Departmental Colloquium, Sheffield University
July 2000	International Workshop on Quantization, Warwick
April 2000	Mathematical Physics Seminar, Loughborough University
February 2000	I.V. Tamm Department of Theoretical Physics,

Meetings (after 2000):

XXII, XXY, XXVII and XXX and Workshops on Geometry in Physics. Bialowieza, Poland, July 2003, July 2006, July 2008 and July 2011 *Plenary talks.* (Opening plenary talk on the last Workshop)

International workshops "Supersymmetry in Integrable Systems - SIS'10" August 24-28, 2010, Yerevan, Armenia, August 01-04 Hannover, Germany *Invited talks*

Third International Conference on Geometry and Quantization GEOQUANT at the University of Luxembourg. September 7 - 11, 2009. *Invited talk.*

International workshops "Supersymmetry and Quantum Symmetries. Dubna, Russia, July 2009, July 2007, and July 2005. *Invited talks.*

XVIII International Colloquium "Integrable Systems and Quantum Symmetries" Prague, Czech Republic, June 18—20, 2009. *Invited Talk.*

One-day Geometry workshop Lyon—Manchester—Loughborough in Loughborough Univeristy. March 13, 2009. *Invited talk.*

Conference "Conformal Filed Theory and Integrability", Nor-Amberd, Armenia, October 2007. *Plenary talk*

"Integrable Day" in Loughborough University November 2006. *Invited talk*

10-th International Conference Symmetry Methods in Physics. Yerevan, 13–20 August, 2003. *Talk presented.*

International workshop "Quantum Gravity and Superstrings". Dubna, Russia, 11—18 July, 2002. *Plenary Talk.*

LMS Northern Meeting and international workshop "Quantization, deformations, and new homological and categorical methods in mathematical physics". Manchester, 7-13 July 2001. *Invited talk*

Reviewing: Mathematical Reviews (1994–1996), Zentralblatt (2000—2003)

Refereeing: Lett.Math.Phys and Journal of Math. Physics.

Editorial work: member of editorial board of the Armenian Journal of Mathematics (since 2008).

4. RESEARCH ACTIVITY.

Main area of research interests: Mathematical problems of Quantum Field Theory, in particular geometry of supermanifolds

Ph.D. thesis:

My Ph.D. thesis was devoted to the following questions:

1. Investigation of objects which can be integrated over supersurfaces in superspace – generalization of differential forms on superspace [1,2,3,4,6].

2. Constructing of Poincaré-Cartan integral invariants for even symplectic structure on superspace [5] and analysis of normal forms of real surfaces in complex superspace [7]; these investigations were applied to problems of supergravity.

An exposition of the results of my thesis was published in [8].

Geometry of odd bracket: In 1986 I started the investigation of the geometry of supermanifolds endowed with odd symplectic structure and its application to quantum field theory. This geometry is natural framework of Batalin-Vilkovisky formalism. I was the first to give the invariant definition of the the BV "delta-operator" (see [14], also [12,13]). Since 1987 I continued these investigations with my postgraduate student A.P. Nersessian [10—20]. In particularly we give an interpretation of the Master Equation as

the nilpotency condition and related BV formalism with integration theory on (super)manifolds.

For odd symplectic superspace a certain divergence-like operator and a non-trivial analogue of the Poincaré-Cartan integral invariant – a density that depends on second derivatives, – were constructed in [11,23]. These objects have no analogues in even symplectic geometry. They can be considered as superanalogues of the mean curvature of hypersurfaces.

In 1999 I defined a new canonical Δ-operator on semidensities. This gives explicit geometrical picture on Batalin-Vilkovisky quantum and classical master-equation and fulfills the gap in the previous considerations. Then I performed a complete studying of the relations between semidenstities in $(p.p)$-dimensional symplectic supermanifolds and differential forms on $(p.0)$-dimensional Lagrangian supersurfaces [25,27,29,31].

Geometry associated with differential operators: Encouraging by results related with Δ-operator on semidensity in a collaboration with T.Voronov I studied odd Laplacians on an supermanifold with odd Poisson structure. We obtained results which disclose deep relations between standard Riemanian and odd Poisson geometry [29]. Then we describe geometry of second order differential operators on an arbitrary manifold [30]. In particularly we studied the pencil of second order operators acting on the space of densities of arbitrary weight, studied the peculiar role of semidensity and classify second-order odd differential operators on supermanifold [32,33].

Last two years I recommence the studying of of operator pencil [43.]

Generalization of Campbell-Haussdorff formulae: I introduced a special class of algebras (so called CH-algebras), obtained a generalized Campbell-Hausdorff formula for them and applied it to the problem of connectivity of Feynman graphs in field theory [18] and statistical physics. Recent development has shown that this construction can be useful with the connection to homotopy algebras and their generalization.

Linear algebra in supercase With T.Voronov we studied Cayley-Hamilton like identites for linear operators in superspace. In particular we obtained new formulae expressing Berezinians (superdeterminant) of supermatrix as a rational function of supertraces [34, 35] and studied the meaning of numerator and denominator of this fraction in terms of resultant of polynomials. We obtained beautiful relations between recurrent sequences and traces of wedged products for linear operators in superspace. This can help to explain some peculiar properties of integration theory on supermanifolds.

p-homomorphisms With T. Voronov we introduced the notion of $p|q$-symmetrical product of commutative algebras and $p|q$-homomorphisms [36, 38]. These constructions are on one hand natural generalisations of symmetric product of commutative algebras and Buchstaber-Rees p-homomorphisms and on the other hand are intimately related with invariants of linear opera-

tors in superspace. In particulary using our approach we give the conceptually short proof of the main theorem about p-homomorphisms [42] [1].

Complexes related with calculus of variations. Cohomology in Physics: In the papers [21,24] with my student D.A. Sahakyan I calculated the cohomological hierarchy in the space of Lagrangians which are defined on a given configuration space and which are weakly invariant w.r.t. a given symmetry algebra. These methods can be successfully used for the investigation of constrained systems and particularly in the BV formalism from the point of view of homological algebra [22,24]. In the paper [28] with Th.Th. Voronov we studied some geometrical aspects of jets geometry and investigated relations between different variational complexes.

Other research: I studied anomalies in field theory using the technique of Seeley coefficients (M.S. thesis, see also [9]).

My projects.

I am planning to do the following:

1. Using formulae constructed for Berezinians in my previous work I plan to consider generalisation of tubes formula for hypersurfaces in superspace: The generating function of volume of tube will be a rational function (in the usual case it is polynomial). I will try to attack the problem of characteristic classes of supersurfaces analysing this rational function. There are mysterious relations between ζ-function for arithmetic surfaces in algebraic number theory and characteristic functions for Berezinians in linear superlagebra. I am trying to analyse these relations and reveal the meaning of Frobenius map in terms of supermathematics. I did some preliminary work in [37].

2. To study the famous relations between Casimir operators for symplectic and orthogonal groups using technique of characteristic functions and parity reversing functors defveloped in my papers [34,35].

3. I just

5. TEACHING.

During my life from 1978 till now I taught different courses in Moscow, Yerevan and Manchester in Mathematical and Theoretical Physics and in

---

[1]Buchstaber-Rees p-homomorphisms are linear maps which obey the special recurrent relations. Buchstaber and Rees proved the Theorem that for commutative associative algebras with unit A and B over real or complex numbers under some technical assumptions on B, there is a one-to-one correspondence between the algebra homomorphisms $S^p A \to B$ and the p-homomorphisms $A \to B$. Here $S^n A \subset A^{\otimes n}$ is the symmetric power of A. In particular, when $A = C(X)$ for a compact Hausdorff space X and $B = \mathbf{R}$, this gives the following extension of the classical theorem of Gelfand & Kolmogorov (1939): for any n, the symmetric power $\mathrm{Sym}^n X = X \times \ldots \times X \, S_n$ is canonically embedded into the linear space $C(X)^*$ so that the image of the embedding is the set of all n-homomorphisms $C(X) \to \mathbf{R}$. The proof of this remarkable result in Buchstaber & Rees (2002) is a tour de force of combinatorial ingenuity.)

Mathematics: Electrodynamics, Quantum Mechanics, Differential Geometry, Applications of Differential Geometry in Theoretical Physics, Group Theory, Homological methods in Physics, Galois Theory, Elements of Functional analysis e.t.c. Now I teach the new course "Introduction in Geometry" for second years students and this year I will teach also the new course "Riemannian Geometry"

Supervision of research students:

Last 7 years I share my PHD students with Ted Voronov. I supervised these years 6 PhD students. Four of them already finished their thesis.

One of my former PhD students (Armen Nersessian) nowdays is the leading researcher in mathematical physics in Yerevan, Armenia.

I regularly supervised projects of undergraduate and master students in Galois Theory and Differential Geometry.

I was four times internal examiner and once the external examiner (Aberdeen 2010) in PHD oral examinations.

I make regularly projects with foundation year students.

6. Social Activity.

1. From 2001 I am helping on the regular basis in organising weekly sessions of Manchester Geometry Seminar

2. From 2003 till 2006 I was responsible for organising staff development proccess in our Department.

3. From 2007 till 2010 I was a member of promotion commitee in the School of Mathematics.

4. I am actively interesting in the process of mathematical education of children in UK. I prepared the talk "Euler Theorem for polyhedra" which I give during interview days for sixthformers. In March 2005 I participated in the conference "Where will the next generation of UK mathematicians come from?"

In February 2008 I had a lecture for general audience "Tubes formula"

5. Now I am fire marshal in our School.
